Abstract

The high-end making, new energy & AI (artificial intelligence) robot will occupy the new reformation field so that the much R & D (research and development) and investment is to be added continually by our government, maker & university. On the other hand, the expertise research must be much stronger, deeper & wider so the related performance is to be published in high-level & high-advanced journal with that paper. That needs to reflect the external and internal intrinsic relationship about searching object defect and inner stress & temperature etc. many physical and chemistry aspects. Therein many relational information can be acquired by our scientist and fellows for them to continuously find and seek the principle result on behalf of complicated exploration about the unbalance and balance relation so as to acquire the virtual and actual phenomena and theoretical base. We should encourage the fellows research aim and direction, thereby the subsequent capital support by government institution & institute and making house and devices etc a series of preferential policy. The more product and equipment made from maker will enhance our high-technique skill and equipment capacity to satisfy the request coming from the society and foreign remands for us to process the foreign trade business actively from factory to seaport transiting other countries and territories. The old and new energy kinetic transformation needs to be transformed by now urgently, and those old low energy kinetic will be collapsed gradually and ultimately for us to learn new one and some interdisciplinary subject applying to the innovation item. The new renewable energy industry as an important factor to decline the gasoline usefulness on vehicle and factories that may start to change the traditional energy source into the low-contamination & high-renewable fuel at all for us to share in the views of the clean atmosphere with the BEV (battery electric vehicles) and making automation-flow-line and some heat-supplying factories. Thereby, the more searching for those transforming course and endeavors would be request through arousing the researcher and scholars explored the source and making process to a certain performance that is to advantage progressing high-functional-equipment making. So the society will continue to develop for us to be employed by those makers and increase the work-opportunity from college and university exhibited their expertise advantageous direction and theme for the sake of improving factory new-quality-productivity with those new and tip subject like some interdisciplinary departments between physics and materials, physics and chemistry, chemistry and physics, physics & administration, automation & physics, electronics & electricity, electronics & physics, electricity & physics etc. those new interdisciplinary departments will occupy the new subjects so as to enhance ours fringe-regional development and cross-disciplinary one trial and development.

Keywords: Progressing high-technique product & GDP systems, by sustainability, an innovated searching

1. Introduction

The foreign and domestic trade business would manifest the advanced aspect recent year that has an important role on transiting goods in one place to others with regards to developed increasingly one region and nation earning much more money from the others and pushed ones from out-resource and nations as to essential items importantly and

rarely. So that the corresponding and consistent produce and equipment should become mutually exportation and importation relationships on how to increase the GDP value with many kinds of products produced by us and enjoy the rarely owning ones abroad. Both of exportation and importation will dominate an important occupation because win-win strategic planning and tactic methods might be proposed by our factories and governmental policies for our

makers and trade relative research department to proceed continually. Moreover, the enhanced raising rate for trade relations must attain a certain one for the sake of increasing the occupation in one region and one nation which may cause the various businesses actively developed and activate local economic behavior so as to transform the various goods among them contributed the local economy prosperity and perspective eventually.

The high-Technique products need to be continually promoted with the maker activities innovatively and launch producing due to declining original cost per product. That would include in many kinds of ones for us to explore constantly on how to make more advance high-technique products involving primarily battery-electric-vehicle that may promote one entire industrial chain in secondary one to approach the tertiary field largely for them in details. There are so many parts for high-technique complete goods worked in up-stream and down-stream enterprises that may employ more people and special in newly out-coming graduates from colleges who may burden a drill in training & exercise course and transforming to various relative departments as well. Therefore, only those passing training teaching and active ones may insist in the many years working experience not faulted in the mid-route failure. We should win the strict course inspection and education for them constantly to proceed their more fitting work to choose and do maybe.

At last the vehicle and motor as one industrial business should be adopted continually to explore and search for the new ones securely and zero accidentally. The rechargeable battery for vehicle needs to be searched for new and innovative one with various compositions like expanded graphene etc ones applied to many dynamic supports. All those may influence on the industrial level strength for our engineer and fellows to chase and transform into the usefulness places. Thereby, the more focus on those new reformation in entire industries chains will be processing as soon as possible.

2. Discussions

The long and many times experimental trial will be necessary in order to guarantee the product property stably and reliably. As for the stable operation and reliable one the more times and choices will be proceeded according to the product property regarding the essential new composition, then not missing the long life and good performance negligently in maker sample room and ensure that all the parts are to be more qualified than the last one for the sake of transforming them to customer side with more security & reliable one. Therefore, don't stop to provide innovation product with the easy operation to proceed normally and refuse its advancement feature because the smart product is entering our real world definitely and absolutely. Only if we continue to work the advancement science & technology the sophisticated product and following effectiveness may be birthed and advocated gradually and eventually. As a scientist he must proceed his searching to push new measures for the sake of updating the traditional theory & experiment largely. A paper might conclude in the entire big mind and subsidiary

diversities to exhibit his performance in front of public readers that contains many sophisticated features and achievements during his a certain time's innovation research. [23~28]

2.1 Top nations hydraulic generation amount analysis

The five permanent nations hydraulic generation situation analysis might show 283 & 180 billion degrees by US & Soviet Union correspondingly in 1979 according to the Figure 1 expressed the US prosperous hydraulic generation trajectory. The y-y value might exhibit -1% & 9% respectively to indicate Soviet Union forwards developed pace.

Figure 1 Top nations hydraulic generation amount analysis. [1]

Meanwhile, the five permanent nations hydraulic generation situation analysis might show 68~55 billion degrees by France~China correspondingly in 1979 according to the Figure 2 expressed the latter France and following China prosperous hydraulic generation trajectory. The y-y value might exhibit 8% ~6% respectively to indicate their forwards developed pace. On the contrary, the Britain remained the least developed pace with -1.7% there.

Figure 2 Top nations hydraulic generation amount analysis I. [1]

2.2 China ten auto companies entering the <Fortune> top 500 ones

On July 28, 2026 the <Fortune> global top 500 companies were released that there were total 35 ones enterprises vehicle and its parts was entry the ranking, the BYD replaced Tesla motor to dominate the global EV(electric vehicle) champion

and become unique entering top 100 ones with China vehicle company. There were ten auto companies and additional nine ones were Japan and Europe auto huge heads respectively. The Volkswagen motor in continuously four years became the biggest vehicle one in here. In the views of earning money China ten ones' average benefit rate was 3% exceeding the global that business with 1.7% average level. In withdrawing CALT with 17% and Jardine Strategic Holdings with 3.2% the last eight ones Chinese entire vehicle making enterprises' average benefit rate attained about 1.5% lowering the global 1.7% average level. This year there are ten China auto companies entering <Fortune> magazine top 500 ones in 2026 with auto & its parts. Therein, the top one was BYD motor occupied 91 position same to last year. The CATL occupation increased to 43 position lied in 260 one. In addition, the Chery auto entered 383 one with market companies' main body identification. Moreover, the BYD sale income in 2025 attained 11.85 billion dollars dominated the scale leadership in vehicle and its parts business that was also uniquely entering top hundred ones. In 2025 the BYD global alignment proceeded and sold the total 4.6 million ones in last year that occupied domestic market rate with 27.9% and overseas sale amount attained 1.05 million with increasing 145% to realize the overseas income rate gained 38.6%. Meantime, the Chery auto participated the reviews with initial market ones main-body identification lied in 383 with sale amount 41.7 billion dollars. Furthermore, the Chery gained the double breakthroughs in 2025 with its performance and strategic planning. Through deepening pushed automation, intelligentization, globalization to complete the company new energy bursting enhancement and overseas sale boom with system overseas. [2]

2.3 Jiangsu province top cities GDP amount changes

The Jiangsu province top 1~4 cities GDP amount changes might show 1,280~2,770 billion yuan by Nantong~Suzhou city correspondingly in H1 2026 indicated the latter Suzhou one higher economic trajectory according to the Figure 1 exceeding Nanjing & Wuxi city with 1,940 & 1,670 billion yuan accordingly.

Figure 3 Jiangsu province top 1~4 cities GDP amount changes. [3]

2.4 China & Britain generating electric amount analysis

The China & Britain generating electric amount might show 27~18 billion degrees by them correspondingly in 1953 according to the Figure 4 exhibited the former China boosted generation electricity trajectory. Meantime, the y-y value might indicate 10% & 0 by them accordingly to indicate the China forwards developed pace. Meanwhile, the China electric generation would attain 0.13° per capita & per day in 1953 where the China population amount had 6.0 billion as for that calculation.

Figure 4 China & Britain generating electric amount analysis. [4]

In short, the society will continue to develop for us to be employed by those makers and increase the work-opportunity from college and university exhibited their expertise advantageous direction and theme for the sake of improving factory new-quality-productivity equipment with those new and tip subject like some interdisciplinary departments between physics and materials, physics and chemistry, chemistry and physics, physics & administration, automation & physics, electronics & electricity, electronics & physics, electricity & physics etc..those new interdisciplinary departments will occupy the new subjects so as to enhance ours fringe-regional research & development and cross-disciplinary one searching and updating. Therefore, those innovation research around multidisciplinary department base & application would be emerged continuously by the expert & scholars in university and maker for the sake of proceeding subsequent new quality productivity item that will provide sharp and tip technology capabilities. Overall, the high-end equipment making capacity might bring up new quality productivity erection in light of building more those devices in the remote place, sand dune and seacoast etc. leisure & broad ones.

3. Conclusions

The high-end making, new energy & AI (artificial intelligence) robot will occupy the new reformation field so that the much R & D (research and development) and investment is to be added continually by our government, maker & university. On the other hand, the expertise research must be much stronger, deeper & wider so the related performance is to be published in high-level & high-advanced journal with that paper. That needs to reflect the external and

internal intrinsic relationship about searching object defect and inner stress & temperature etc. many physical and chemistry aspects. Therein many relational information can be acquired by our scientist and fellows for them to continuously find and seek the principle result on behalf of complicated exploration about the unbalance and balance relation so as to acquire the virtual and actual phenomena and theoretical base. We should encourage the fellows research aim and direction, thereby the subsequent capital support by government institution even institute and making house and devices etc a series of preferential policy. The more product and equipment made from maker will enhance our high-technique skill and equipment capacity to satisfy the request coming from the society and foreign remands for us to process the foreign trade business actively from factory to seaport transiting other countries and territories. The old and new energy kinetic transformation needs to be transformed by now urgently, and those old low energy kinetic will be collapsed gradually and ultimately for us to learn new one and some interdisciplinary subject applying to the innovation item. The new renewable energy industry as an important factor to decline the gasoline usefulness on vehicle and factories that may start to change the traditional energy source into the low-contamination & high-renewable fuel at all for us to share in the views of the clean atmosphere with the BEV (battery electric vehicles) and making automation-flow-line and some heat-supplying factories. Thereby, the more searching for those transforming course and endeavors would be request through arousing the researcher and scholars explored the source and making process to a certain performance that is to advantage progressing high-functional- equipment making.
